Highly Pathogenic Avian Influenza in Czechia

SCoPAFF meeting, 20th November 2025

Overview – outbreaks in the Czech Republic

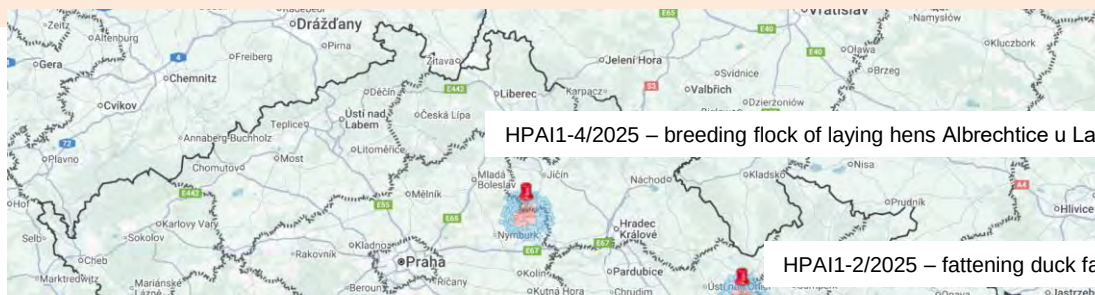

- 7 outbreaks in commercial poultry farms
- 17 outbreaks in backyard farms (captive birds – non poultry)
- 1 outbreak in slaughterhouse
- 11 positive wild birds in 8 locations

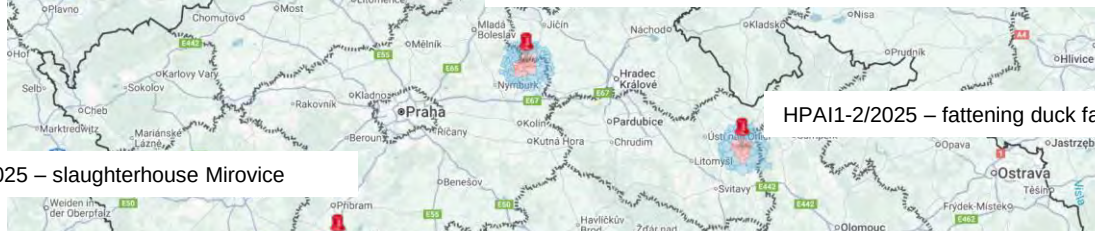

-  Poultry and slaughterhouse (No 3)
-  Wild birds
-  Captive birds

Poultry outbreaks in 2025

- 18. 5. 2025 – date of NRL confirmation in **Čejkovice**/Southern Moravian Region – HPAI1-1/2025 commercial pheasant farm
- 10. 11. 2025 – date of NRL confirmation in **Valdík**/Region of Vysočina – HPAI1-2/2025 – commercial fattening duck farm
- 10. 11. 2025 – date of NRL confirmation in **Mirovice**/Southern Bohemian Region – HPAI1-3/2025 - slaughterhouse
- 11. 11. 2025 – date of NRL confirmation in **Albrechtice u Lanškrouna**/Pardubice Region - HPAI1-4/2025 - commercial farm of laying hen breeding flock producing hatching eggs
- 13.11.2025 – date of NRL confirmation in **Nouzov u Dymokur**/Central Bohemian Region – HPAI1-5/2025 – commercial breeding duck farm for production hatching eggs
- 16.11. – date of NRL confirmation in **Blatná**/Jihočeský kraj – HPAI1-6/2025 – commercial fattening ducks farm
- 18.11 – date of NRL confirmation **Blatná – Řitovíz** and **Blatná – Topič**/Jihočeský kraj – HPAI1-7/2025, HPAI1-8/2025 – fattening ducks

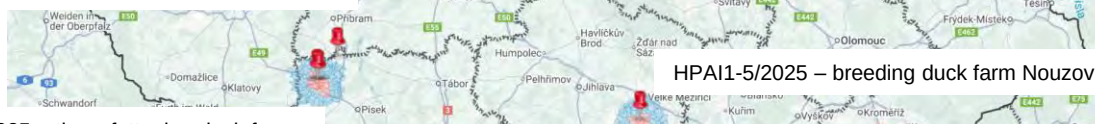

HPAI1-4/2025 – breeding flock of laying hens Albrechtice u Lanškrouna

HPAI1-2/2025 – fattening duck farm Valdík

HPAI1-3/2025 – slaughterhouse Mirovice

HPAI1-5/2025 – breeding duck farm Nouzov u Dymokur

HPAI1-6,7,8/2025 – three fattening duck farms municipality Blatná

HPAI1-1/2025 – pheasant farm Čejkovice

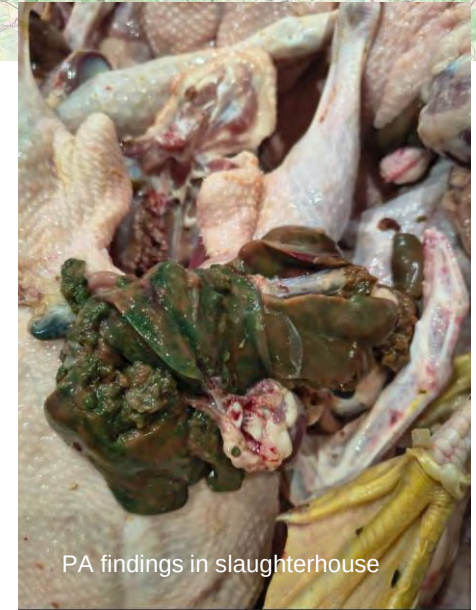

Mirovice, Valdík

Slaughterhouse in **Mirovice** in Southern Bohemian Region – HPAI1-3/2025

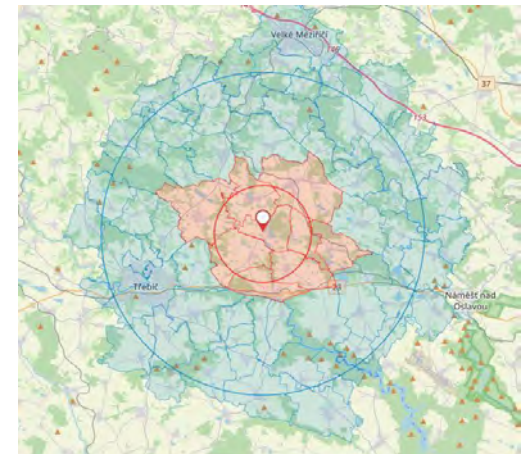

- 10.11. suspicion at slaughterhouse concerned slaughtered ducks originating from Valdík based on the pathological-anatomical findings (green liver) and the information that there has been increased mortality in the farm
- same day – official samples to NRL, preliminary veterinary measures, NRL confirmation HPAI H5N1
- 11.11. – extraordinary veterinary measures – disposal of all products at the slaughterhouse from that day, based on a risk assessment, no restricted zone was established in accordance with Article 21(3)(c).
 - on the slaughter line, there were ducks from a total of three farms - Valdík were processed first – decided that all products belong to a single batch because they were not separated during slaughter and all were classified as category II animal by-products intended for rendering plant
 - part of the animal by-products was transported on the day of suspicion from the slaughterhouse to the rendering plant in accordance with Article 7(5)
- 12.11. remaining animal by-products (50 tons) sent to the rendering plant, preliminary cleaning and disinfection, 13. 11. final cleaning and disinfection

Fattening duck farm in **Valdík**/region of Vysočina – HPAI1-2/2025

- in connection with the suspicion of HPAI at the slaughterhouse same day an epizootologic investigation in Valdík with a farm with nearly 30,000 fattening ducks
- on-site inspection – massive mortality (2 700 birds) and clinical signs (lethargy, ruffled feathers, neurological symptoms)
- farmer did not report the increased mortality and sent the ducks to the slaughterhouse and causing its possible further spread. The farmer will bear the consequences for violating legislation and spreading the infection
- same day – official samples to NRL, preliminary veterinary measures, NRL confirmation HPAI H5N1
- 11.11. - extraordinary veterinary measures – 12.11. culling and disposal, preliminary cleaning and disinfection, established restricted zones – 4 commercial farms (3 hatcheries) until 13.12.2025
- in the 21 days prior to the suspicion – 5.-7.11. ducklings from the hatchery from Region of Hradec Králové were delivered to the farm by a vehicle that was subsequently disinfected and did not visit any other farm. All ducks stocked from this farm were always transported exclusively to the Mirovice slaughterhouse. Positive ducks sent to the Mirovice slaughterhouse came from a batch delivered 17.,24., 29.9. 2025 from hatchery Chlumec nad Cidlinou – epizootologic investigation ongoing

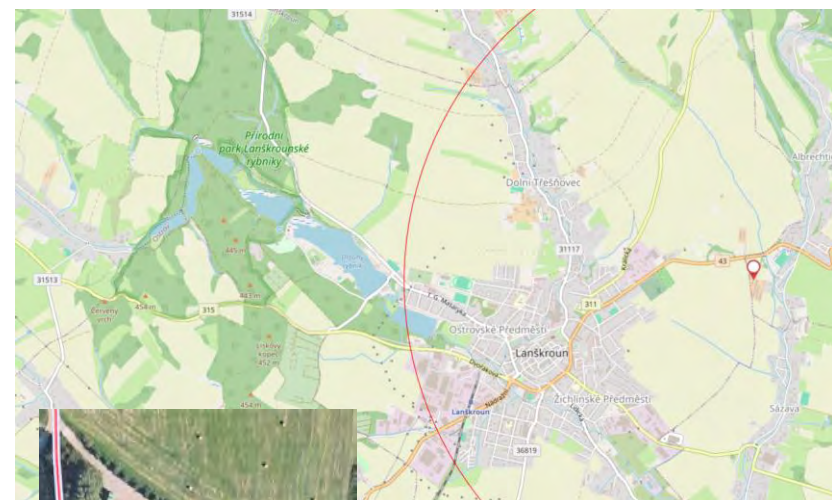

Established restricted zones around outbreak Valdík

Laying hen breeding flock producing hatching eggs farm in **Albrechtice u Lanškrouna**/Pardubice Region - HPAI1-4/2025

- 11.11. suspicion - significant mortality (650 birds) and decrease in egg production in house No 3
- age 28 weeks, 7 houses, in total 53 300 birds, 60 000 hatching eggs
- same day – official samples to NRL, preliminary veterinary measures, NRL confirmation HPAI H5N1
- 12.11 - extraordinary veterinary measures – 13.11. culling and disposal, preliminary cleaning and disinfection, established restricted zones until 15.12.2025
 - within the surveillance zone (5,32 km from outbreak) rendering plant located in Žichlínek, no commercial poultry farms in the restricted zones
 - surveillance zone extends into the territory of the Olomouc Region
- the epidemiological investigation is ongoing
 - source of the infection – probably wild waterfowl – location with a system of ponds with a very diverse and numerous fauna. Last week, there were strong westerly winds, and barn No. 3 is slightly elevated above ground level and protrudes, with air intake on the western side (virus spreading)
 - no eggs were traded within the EU or exported as hatching eggs. Incubation in hatcheries was not completed for any eggs, so no chicks were hatched.
 - 200 m from outbreak small-scale farm (water area in the middle, low biosecurity) sampled as a part of the epizootologic investigation – in total 32 bird (17 chickens, 1 guinea fowl, 5 peafowls, 3 ducks, 6 geese) no mortalities and no clinical signs - cloacal and tracheal swabs were taken from 15 birds. Waiting for the NRL confirmation.

Nouzov u Dymokur

Breeding duck farm for production hatching eggs **Nouzov u Dymokur**/Central Bohemian Region – HPAI1-5/2025

- 13.11. suspicion high mortality (150 ducks) aged six weeks out of a total of 2,225
- on-site inspection ducks with neurological symptoms and signs of apathy
- same day - official samples, preliminary veterinary, NRL confirmation HPAI H5N1
- ducklings were stocked on 27 October 2025 at the age of 3 weeks from a flock owned by the same producer in the Hradec Králové Region, which is located within the newly established restricted zone where no high mortality is detected and samples will be taken
- epizootological investigation is ongoing
- no animals have been moved from the flock since stocking
- 14.11. extraordinary veterinary measures – culling on 18.11., preliminary cleaning and disinfection, established restricted zones until 18.12.
 - both zones extends into the Hradec Králové Region

Three fattening duck farm in municipality Blatná/Southern Bohemian Region – HPAI1-6/2025, HPAI1-7/2025, HPAI1-8/2025 – all outbreaks by the pond

— farm Blatná:

- 15. 11. suspicion – high mortality (378 birds) out of 2 500 in one house by pond Řitovíz
- on-site inspection of ducks with apathy and green feces
- same day – official samples, preliminary veterinary
- 16.11. NRL confirmation HPAI H5N1

— farm Řitovíz:

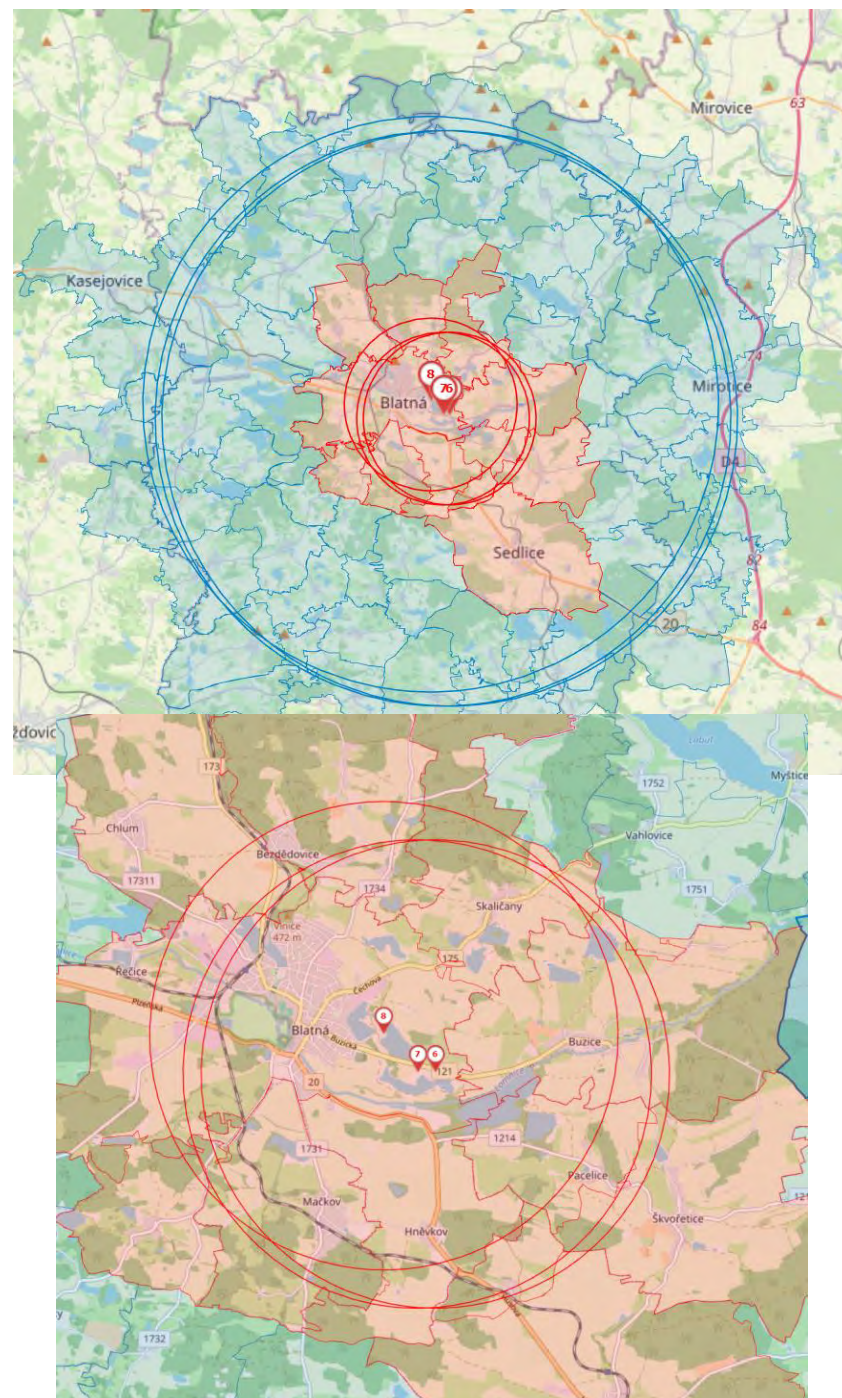

- 16.11. suspicion - neurological symptoms, excitation
- 230 m from Blatná outbreak
- in total 7 800 ducks in one house
- 17.11. public holiday – official samples, preliminary measures
- 18.11. NRL confirmation

— farm Topič:

- 17.11. - preventive sampling due to planned dispatch to slaughter (no clinical symptoms and no high mortality during sampling)
- 18.11. neurological symptoms and NRL confirmation

Extraordinary veterinary measures - culling all farm 19.11. – 20.11.2025, restricted zones extend to Region of Pilsen and Central Bohemian Region

An epidemiological investigation is ongoing

Captive birds outbreak in 2025

- 17 outbreaks hobby owners
- all measures were implemented in compliance with the Commission Delegated Regulation (EU) 2020/687

- 7 Studénka nad Odrou - rybník Kotvice (24.10.2025)
- 8 Choryně - Velký choryňský rybník (29.10.2025)

The timing of the outbreaks corresponds precisely to the major nocturnal bird migration that occurred during the night of October 13–14, which was detected by the meteorological radar. After three weeks, cases appeared in poultry farms; the map of outbreaks (considering outbreaks 2–6) supports this correlation.

Preventive actions

Prior to this migration wave, we carried out an awareness campaign in anticipation of the autumn migration, targeting poultry keepers. We contacted all municipalities, requesting that they publish information on their official notice boards about the risks of HPAI and NCD, the approaching autumn migration, and the importance of preventive measures.

Follow-up actions

Informing the general public through press releases, web pages SVS and the professional community through letters about the increased risk of spread situation and the importance of preventive measures.

**Thank you
for your attention**
