

Highly pathogenic avian influenza

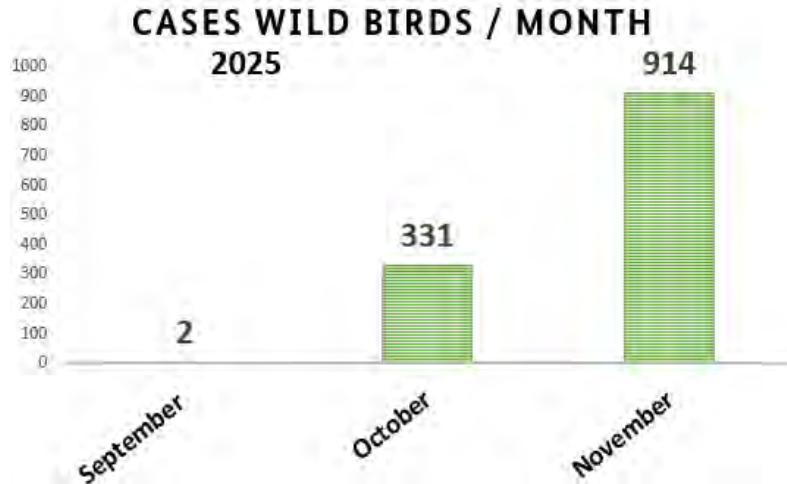

Current Situation in Germany

SCoPAFF-meeting November 2025

Situation in **wild birds**

November 2025

High level of HPAI cases in wild birds, mainly **wild cranes** but also **wild geese, seagulls** and **swans** are affected: **1,247 cases**

Bundesministerium
für Ernährung
und Landwirtschaft

Situation in **poultry** and **captive birds**

Period of time	Number of outbreaks
Active outbreaks on 19/11/2025 (16/10/2025)	119 (9)
New from 16/10/2025 (~last PAFF) until 19/11/2025	114 Zoo: 3 Poultry: 102 NON-Poultry: 9
“Season” from 01/09/2025 until 19/11/2025	125 (8 lifted)

Situation in **poultry** and **captive birds**

“Active”
outbreaks on
19/11/2025

Turkeys are mainly
affected.
few private
holdings with
captive birds

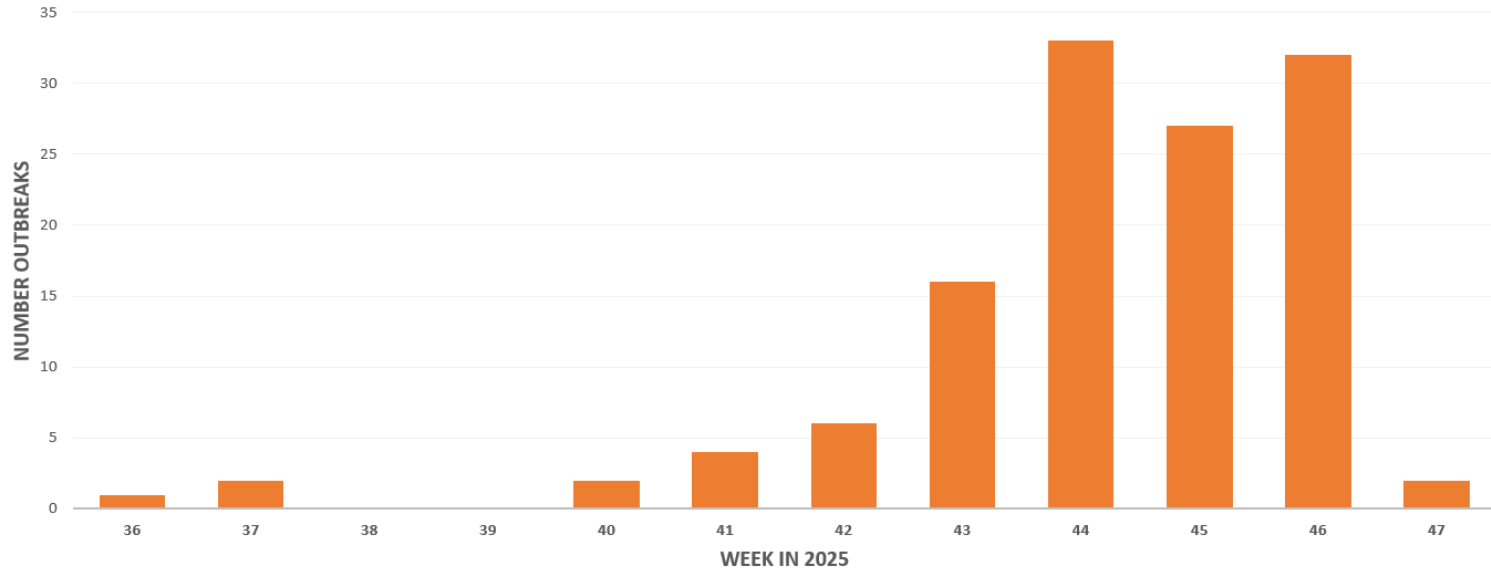

Measures are in place

Bundesministerium
für Ernährung
und Landwirtschaft

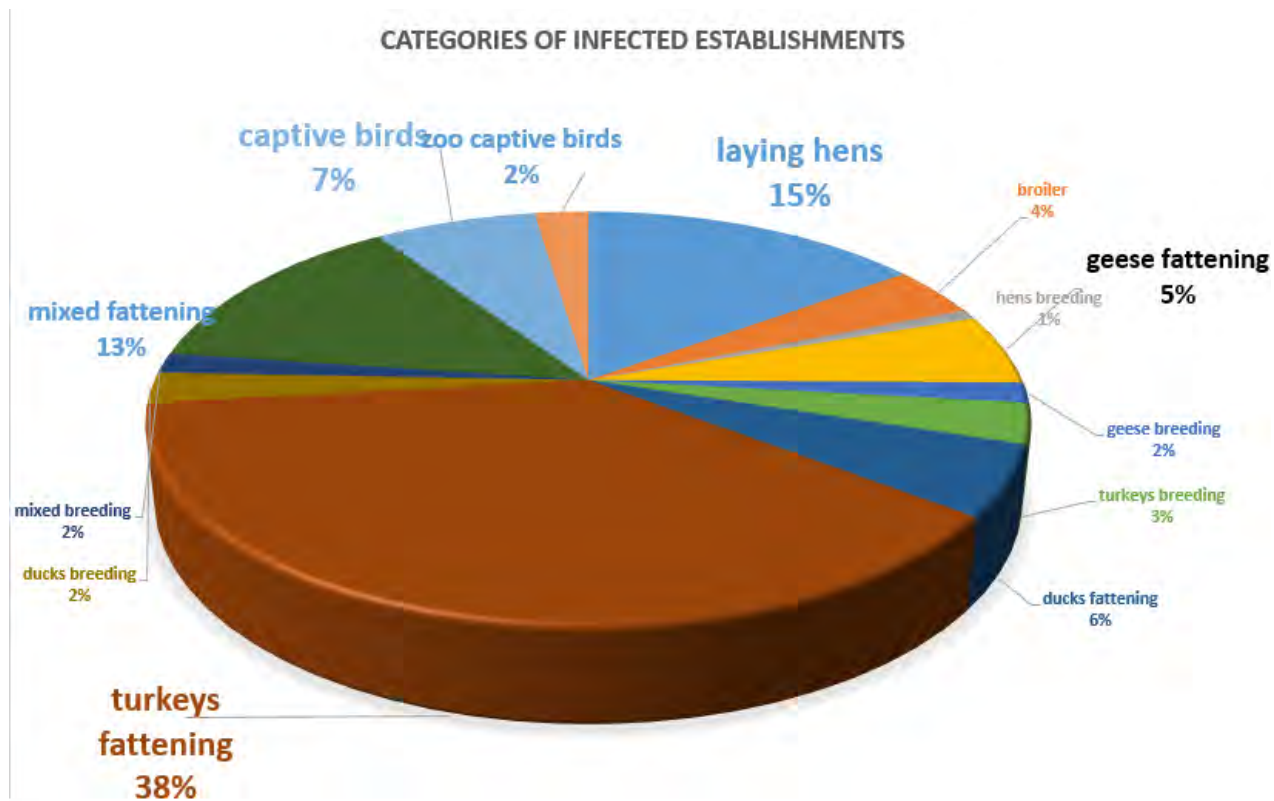

Evolution: **Poultry** and **captive birds**

Number of outbreaks per week 01/09/2025 to 19/11/2025

Bundesministerium
für Ernährung
und Landwirtschaft

Establishments: **Poultry** and **captive birds** 01/09/2025 -19/10/2025

Situation in **poultry** and **captive birds** in **lower saxony**

Two districts (Cloppenburg, Vechta) in lower saxony are currently particularly affected by avian influenza.

- Very high infection pressure from the wild bird population – **213 wild birds positive**
- Extremely high density of poultry farms (see next slide)
- No spread of the virus between farms has been detected

Situation in **poultry** and **captive birds** in **lower saxony**

restocking ban
for turkeys

61 “Active”
outbreaks on
19/11/2025

Bundesministerium
für Ernährung
und Landwirtschaft

Measures in **poultry** and **captive birds** in **lower saxony**

Both districts

- Measures according to Delegated Regulation (EU) 2020/687 are applied promptly and thoroughly by the competent authorities.
- The appropriateness of measures is continuously reviewed.

Cloppenburg

- Merging of the restricted zones for the current HPAI outbreaks in the municipalities of Garrel, Bösel and Friesoythe in accordance with point 1 and 2 of Art. 64 of Regulation 2016/429 and Art. 21(2) of Delegated Regulation 2020/687
- Administrative challenge due to several competent authorities involved
- Protection zones will remain separately → individual lifting after risk assessment
- Measures of surveillance zone will then apply
- Aim: Reduction of density of poultry. Most important. Removal of turkeys from that area to slaughterhouses remains possible
- Additional measure: restocking ban according to Art. 71(1) of Regulation (EU) 2016/429 in conjunction with § 32a of the German Avian Influenza Ordinance

Measures in **poultry** and **captive birds** in **lower saxony**

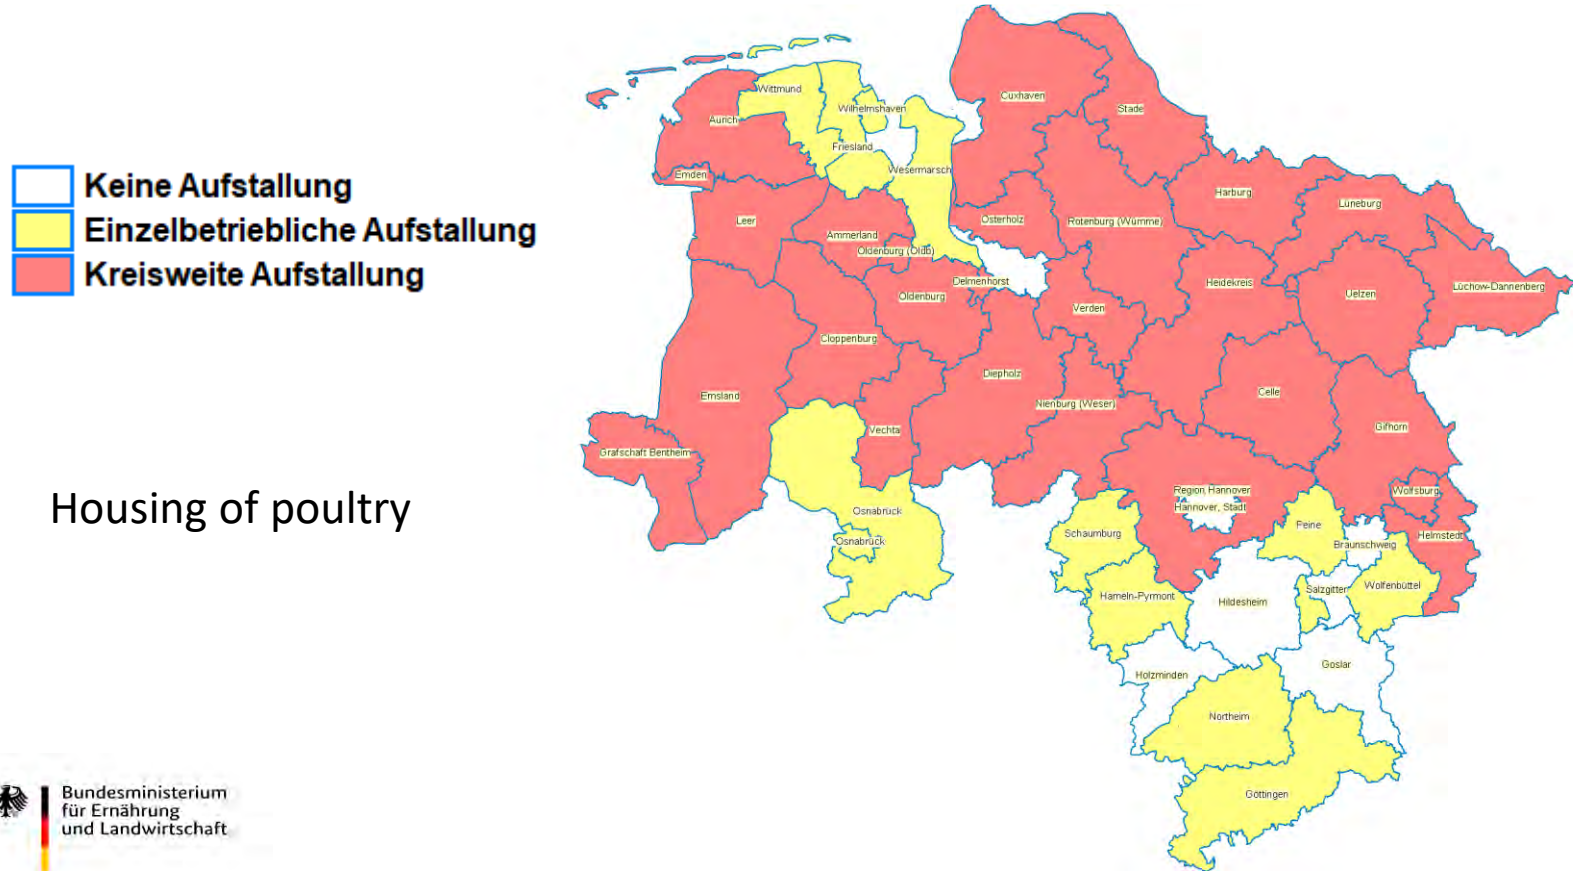

Vechta

- Different epidemiological Situation
- Mostly laying hen farms (around 100) and complete indoor holding
- Only small number of turkey farms (28), 25 thereof in restricted zones, a third empty
- No merging of zones here  no significant effect on poultry density

Both districts

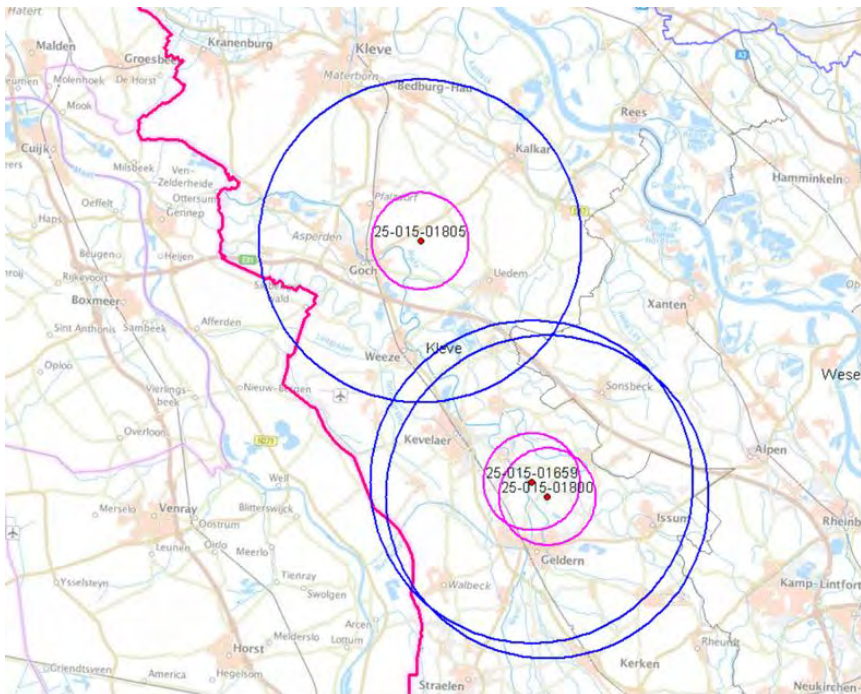

- Animal welfare aspects have been taken into account
- Transport of turkeys to slaughter Facility is possible if necessary and no risk of spread
- Housing, see next slide

Measures in **poultry** and **captive birds** in **lower saxony**

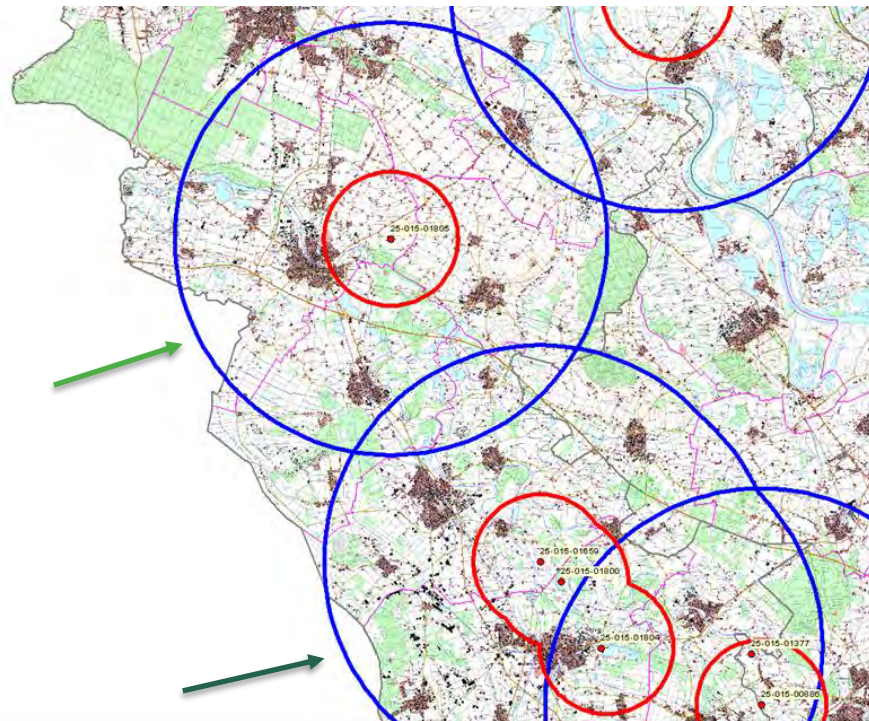

Situation in **poultry** and **captive birds** in North Rhine-Westphalia

Three HPAI outbreaks in North Rhine-Westphalia near the Dutch border. The Netherlands are located in the 10 km zone of the following outbreaks **DE-HPAI(P)-2025-00115 – DE-HPAI(P)-2025-00116 - DE-HPAI(P)-2025-00118**

Bundesministerium
für Ernährung
und Landwirtschaft

Summary

- Number of cases in **wild birds very high**, so is the **infectious pressure**
- Number of cases in **poultry increased highly** since last PAFF, mainly turkeys in high density areas are affected
- Situation is **under control, no chains of infection**
- Awareness and **preparedness** very important! To protect their animals, animal owners were asked and reminded to comply with applicable **biosecurity measures**, to critically examine them and to optimize them where necessary
- Risk assessment 06/11/2025 still results in **high risk**
