

Highly pathogenic avian influenza in Denmark - current situation

SCoPAFF-meeting 24.-25.03.26

23 March 2026

HPAI H5N1 in Denmark 2025/2026 season

Season 2025/2026: Total 30 outbreaks of HPAI H5N1 – all primary

- Poultry: 25 – (6 layers, 6 turkeys, 1 mixed, 4 gamebirds, 8 hobby flocks)
- Captiv birds: 5

Outbreaks 2026: Total 16

- Poultry: 13 (3 layers, 2 turkeys, 2 gamebirds, 6 hobby flocks)
- Captive birds: 3

New outbreaks since last meeting: Total 13

- Poultry: 10 (3 layers, 2 turkeys, 2 gamebirds, 3 hobby flocks)
- Captive birds: 3

Outbreaks since last meeting

Outbreak no. ADIS	Date of confirmation	Municipality	Species	Type	Number of animals	10 km zones applicable at least until
30 H5N1 DK-HPAI(P)-2026-00013	14.03.2026	Ringsted	Pheasants, hens	Gamebirds Breeding	3530	16.04.2026

18 H5N1 DK-HPAI(P)-2026-00004	19.02.2026	Holbæk	Pheasants	Gamebirds Breeding	876	23.03.2026

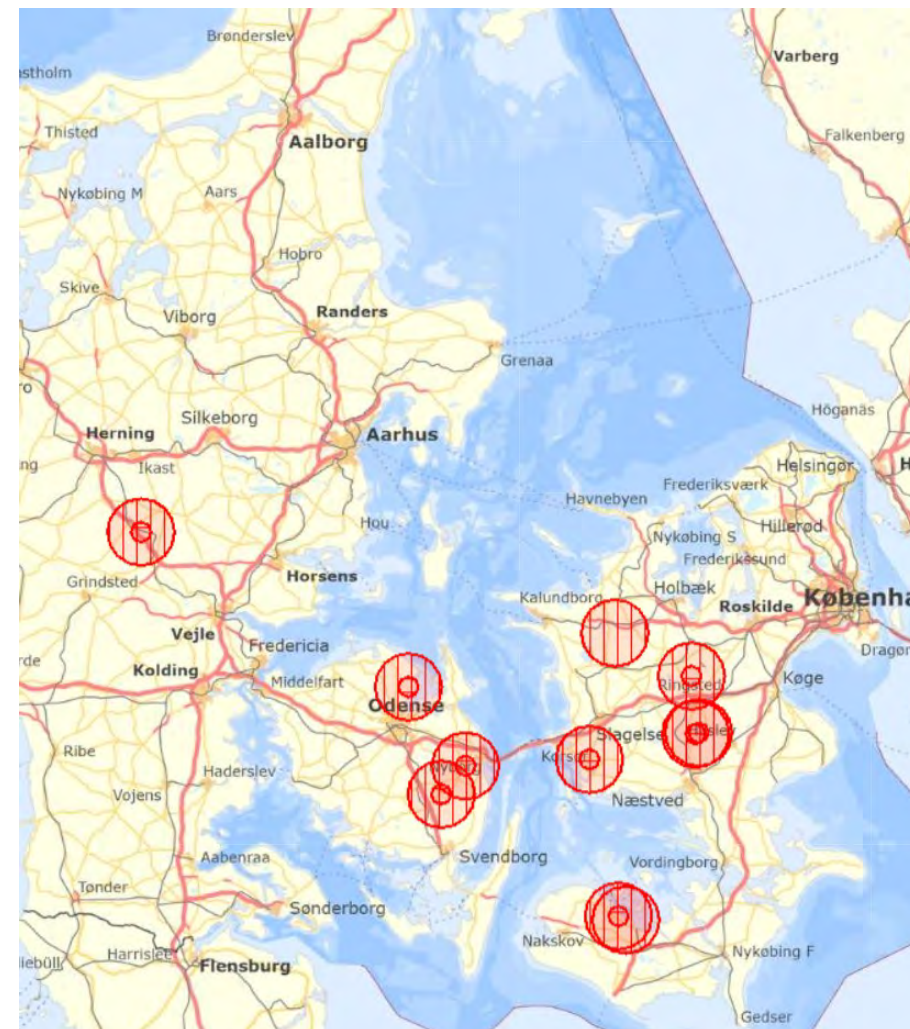

HPAI H5N1 in Denmark since last meeting

All measures according to regulation (EU) 2020/687

- **Primary outbreaks – HPAI H5N1**
- **Clinical suspicions**
- **Culled completed**
- **Disposed of by rendering**
- **Preliminary C&D approved**
- **3 and 10 km zones established**
- **Derogation for captive birds**
- **Screening in zones**

Genotype DI.2

HPAI H5N1 in Denmark since last meeting

Source of infections

- Epidemiological investigations still ongoing, but most probably indirect contacts with wildbirds.
- All primary outbreaks

In general biosecurity ok

- But hobbyflocks, turkeys and gamebirds are not housed in very closed establishments

Outbreak no 20: 98.800 layers with low level of biosecurity

- Poor maintenance, access for wild birds, pest control inadequate, garbage around the buildings, etc.
- possible police case

Outbreak no 25: Hobbyflock with low level of biosecurity

- hens, geese, ducks, pheasants, pigeons, ornamental birds and different (pet) mammals – pigs, goats, dogs, cats, rabbits, guineapigs etc.
- No separation between species
- Mammals tested – all negative for HPAI

HPAI H5N1 in Denmark 2025/2026 season – further measures

Still high risk period

- national regulation in place since October 2025/indoor housing order
- feed and water under roof/indoor
- ducks and geese should be kept apart/no contact with other poultry
- ban of markets, exhibitions and other gatherings
- preventive vaccination in zoos

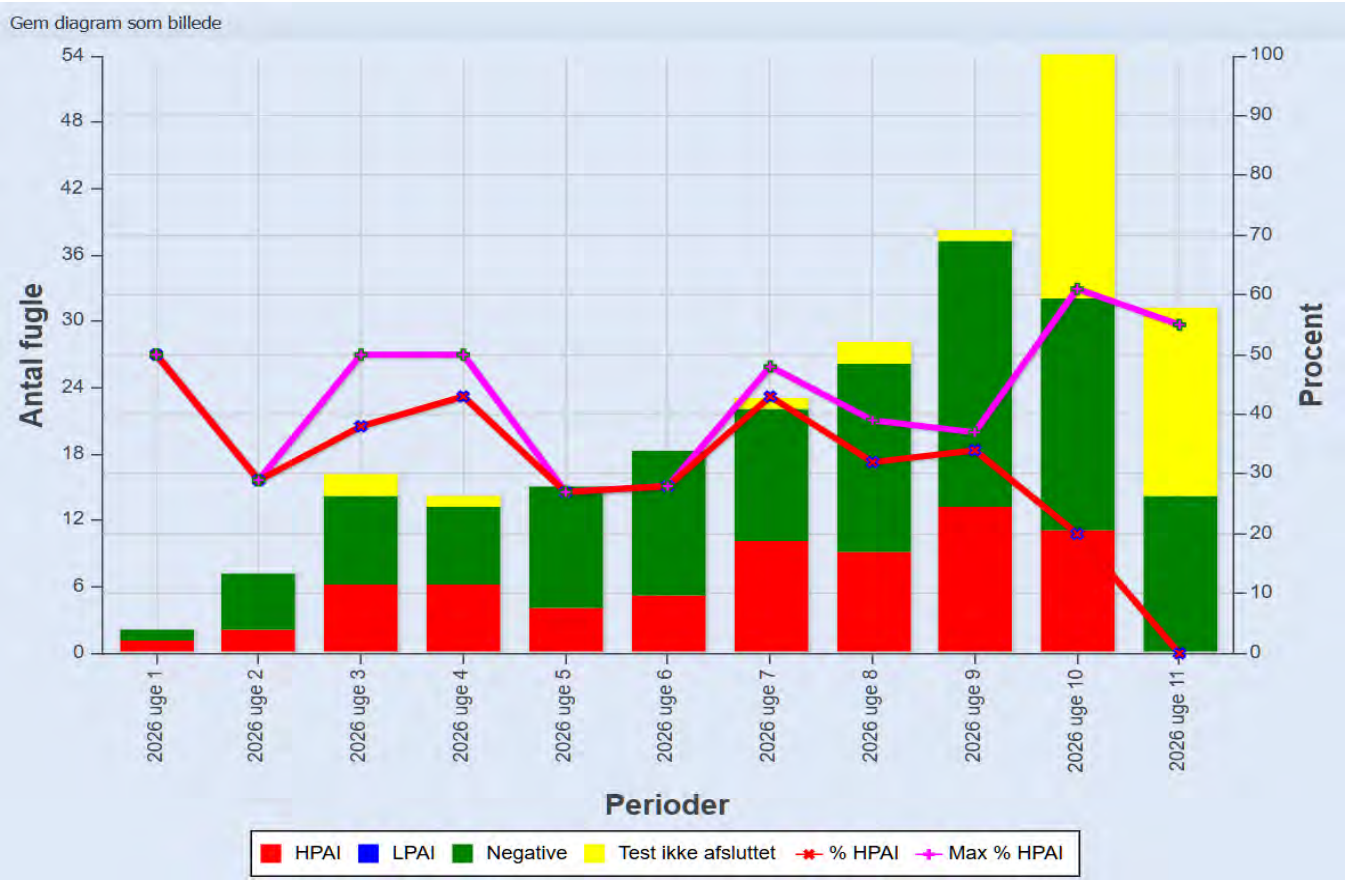

Still focus on increased awareness/biosecurity

- Press releases, info at webpages, meetings with stakeholders, so-me etc.
- General info and info targeted at stakeholders:
 - Biosecurity
 - focus on clinical symptoms
 - wild birds
- Weekly expert group meetings
- Epidemiological report for each outbreak

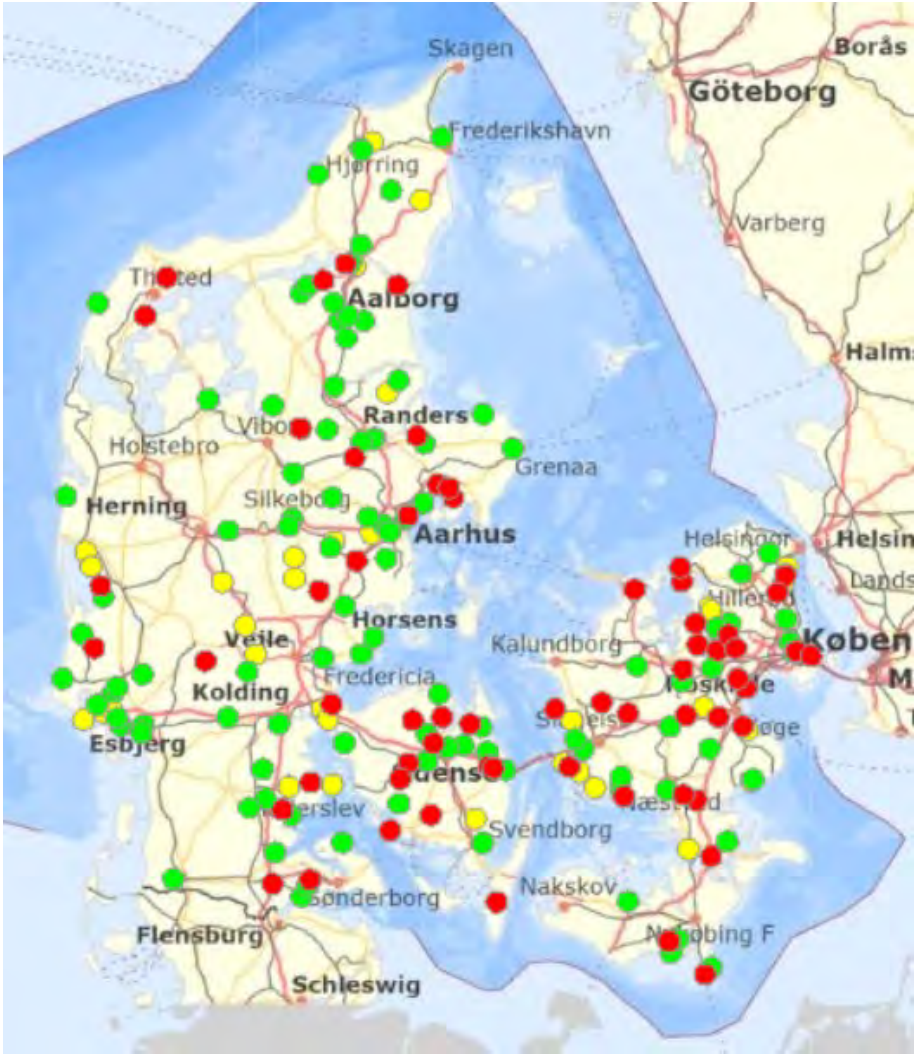

Campaign with extra control of biosecurity in poultry establishments with focus on hobby flocks is being planned

HPAI Wild birds 2026

87 outbreaks notified for HPAI H5N1
One H5N5, blackheaded gull north/west Jutland
Swans, geese, birds of prey, gulls
Several in pipeline

Wild birds HPAI tested 2026
Red: positive, Green: negative, Yellow: test not finalised

Thank you for your attention
