turkeys

Epidemiological situation in poultry in kujawsko-pomorskie region

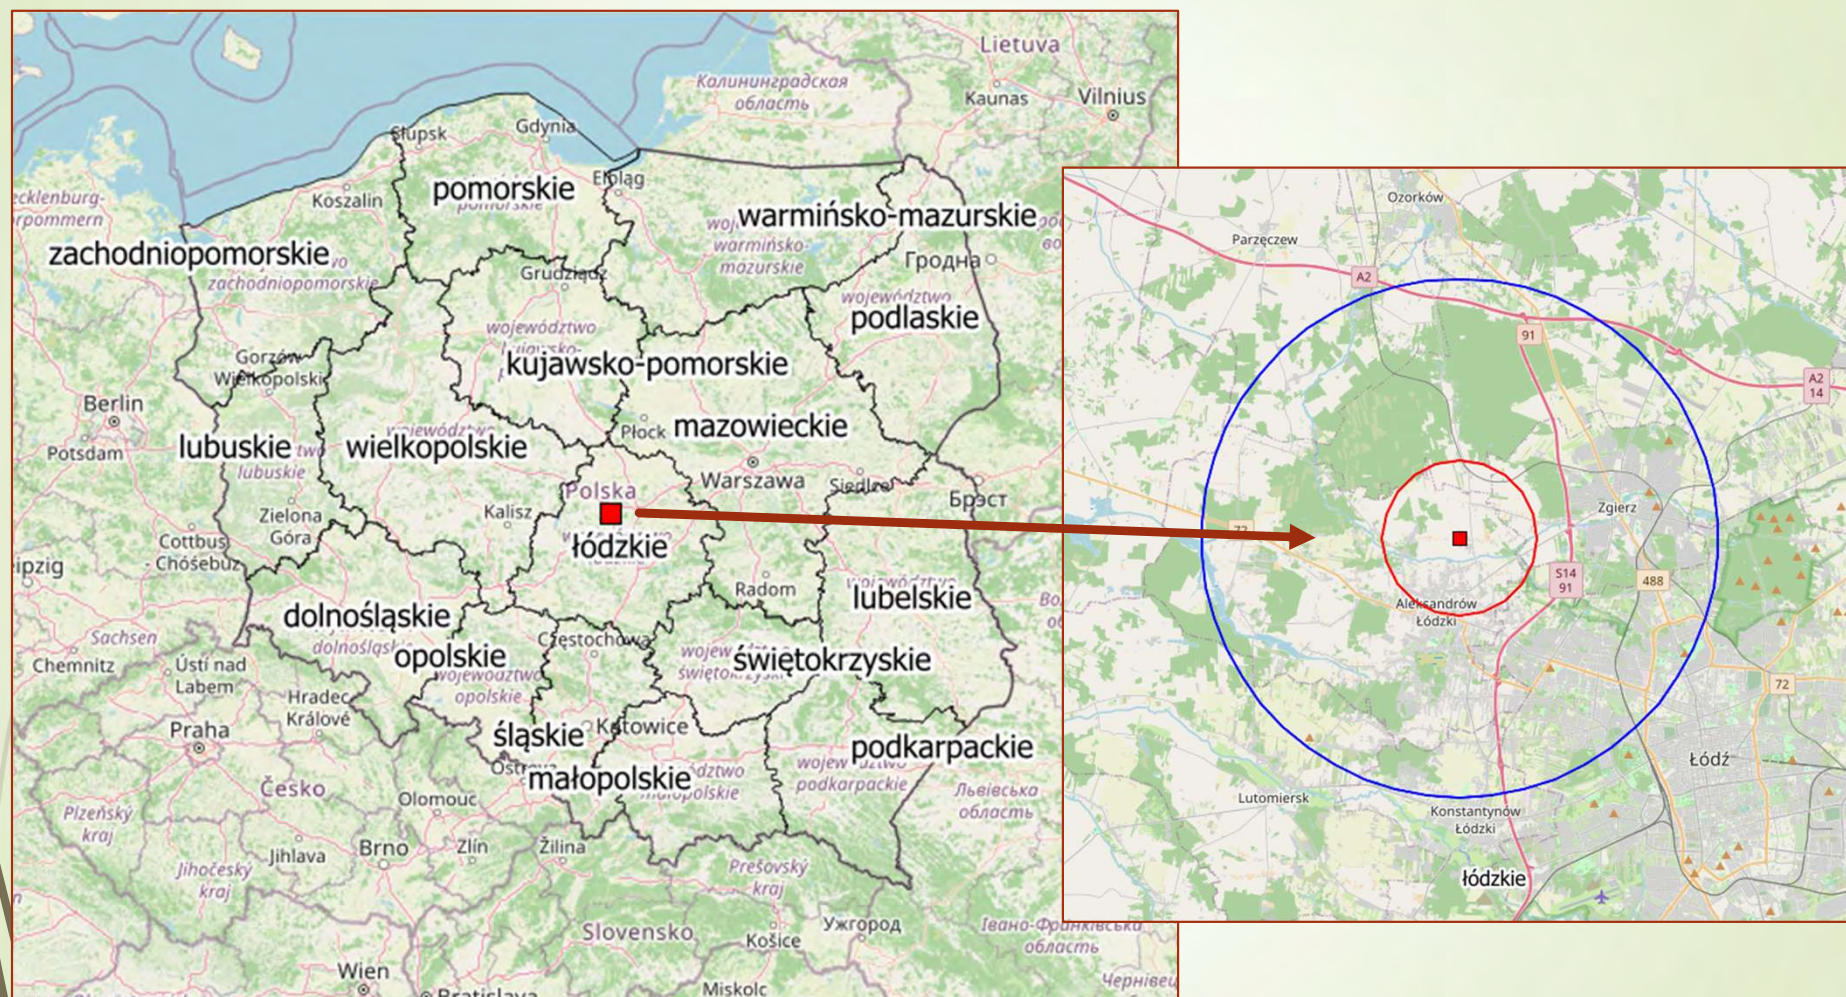

3 new outbreaks

ADIS NUMBER	NATIONAL NUMBER	DISTRICT	POPULATION	PRODUCTION TYPE
PL-HPAI(P)-2026-00101	100	lipnowski	11 318	Breeding and laughter geese
PL-HPAI(P)-2026-00106	105	golubsko-dobrzyński	29 100	Laying hens
PL-HPAI(P)-2026-00128	127	brodnicki	1900	Slaughter geese

42 318
birds

Epidemiological situation in poultry in łódzkie region

ADIS NUMBER	NATIONAL NUMBER	DISTRICT	POPULATION	PRODUCTION TYPE
PL-HPAI(P)-2026-00130	129	zgierski	5727	slaughter geese

Further restricted zones – control measures

The following measures are required in the FRZ:

- immediate removal of carcasses of poultry or other birds from the holding;
- immediate cleaning and disinfection of means of transport and equipment used for the transport of poultry or other birds, their meat, feed, litter, natural fertilizers, and any other objects or substances that may have been contaminated with the highly pathogenic avian influenza virus;
- application of biosecurity measures by persons entering or leaving the holding in order to prevent the spread of highly pathogenic avian influenza; in particular, placement of disinfection mats at entrances, exits, entry points, and exit points to and from holdings keeping poultry, as well as disinfection of hands and footwear by persons entering and leaving the holding;
- immediate notification of increased morbidity or mortality, or a significant decrease in the productivity of animals kept on the holding.

The following prohibitions apply in the FRZ:

- introducing into or removing from holdings where poultry is kept any poultry or other captive birds without the consent of the competent District Veterinary Officer;
- removal or spreading of litter or natural fertilizers without the consent of the competent District Veterinary Officer;
- organization of fairs, exhibitions, shows, or competitions where poultry or other birds are gathered;
- movement and transport of poultry or other birds, including day-old chicks, pullets, hatching eggs, and table eggs, without the consent of the competent District Veterinary Officer;
- transport of poultry meat from establishments located in the restricted area without the consent of the competent District Veterinary Officer.

Preventive culling - analysis

- 1 step:

- Sanitary regime of the primary holding (outbreak farm) – no or limited contact with neighboring farms, feed stored in a manner protecting it from the virus, epidemiological links, level of biosecurity
- Assessment of biosecurity on farms within the area
- Number of poultry outbreaks in the county during the last 30 days
- Are there any areas nearby conducive to the presence of wild bird habitats?
- Previous experience/history within the district
- Movement of poultry, poultry products or products derived from poultry, and animal by-products from the outbreak farm to other holdings
- Assessment of the risk level for HPAI occurrence
- Density of farms/flocks keeping susceptible species (including non-commercial holdings) Number of outbreaks in wild birds confirmed in the county during the last 3 months

Preventive culling - analysis

■ II step:

- Movement of poultry — movement of poultry, poultry products or by-products from the outbreak to a contact holding after the probable time of virus introduction into the infected holding
- Links between persons (staff/veterinarians/owners/family) and the HPAI outbreak in poultry
- Biosecurity assessment in the holding
- Type of poultry
- Distance between the holding and locations in the vicinity that may favour the presence of wild bird habitats
- Commercial status
- Past HPAI outbreak — a previous HPAI outbreak has been confirmed in the holding
- Clinical signs
- Distance to outbreak
- Flock value

Preventive culling – most affected regions

Mazowieckie – 67 farms (4 028 273 birds)

Warmińsko-mazurskie – 18 farms (344 500 birds)

The analysis is based on currently available data; final figures may differ following data validation.

Epidemiological situation since 1st January 2026
